TRAVEL THE SIGNAL WORLD

ABOUT LINRATEK

CEO-Shensong Shi

Graduated from South China University of Technology in 1999, majoring in Electronics and Information Engineering, worked for two leading companies in the communications industry, and founded Foshan Lintratek Technology Co., Ltd. in 2021.

MOTTO

More haste, less speed. 欲速則不達

COMPANY PROFILE

Foshan Lintratek Technology Co., Ltd. is a professional manufacturer of mobile communication equipment integrating R&D, production and sales. Its subsidiaries include Shenzhen Lintratek Communication Technology Co., Ltd. and Hong Kong Lintratek International Holdings Co., Ltd. With a strong R&D technology and sales system, the scale of the enterprise ranks in the forefront of its peers.

Over the years, through the introduction of technology and the establishment of scientific research teams, Lintratek currently holds a number of patents in the signal amplifier industry and has the ability to customize new miniature repeaters for customers. OEM services include: independent appearance design (logo design, color design, appearance mode design, display design, etc.); special function customization (regional characteristic frequency band combination, output power customization, etc.); unique packaging and manual customization. At the same time, we are looking for domestic and foreign distributors to cooperate to build the lintratek brand

COMPANY CULTURE

"Enterprise is human" enterprise culture is the culture of enterprise people, belongs to the ideological category, is the value concept of people, this value concept and ideological ethics belong to the same category.

SIGNAL REPEATER

FOR CELL PHONE

Function Explain

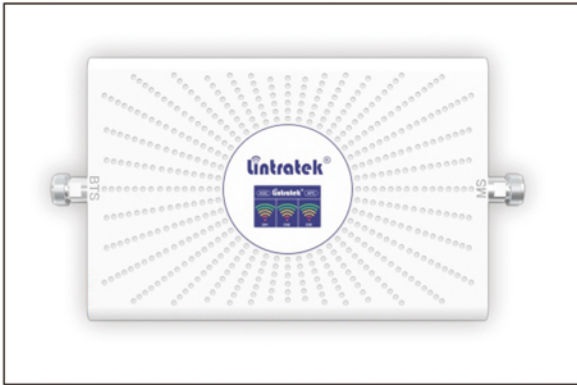

Cell Phone Signal Amplifier

The base station, it has the advantages of simple structure. Less investment and convenient installation. It can be widely used in areas where the signal is difficult to cover and weak areas, such as residential buildings, commercial complexes, underground parking lots, subways, tunnels, suburbs, remote mountainous areas, elevators and other places where the signal is poor. (It can be widely used in hard to cover areas and weak signal areas, such as residential buildings, shops, rental houses, shopping malls, hotels, airports, gymnasiums, entertainment halls, parking lots, subways, tunnels and other places) application scenarios also include remote meter reading, intelligent monitoring and other data transmission, effectively solving the problems of Internet access and communication, and improving the communication quality.
